WORK SUMMARY

Software engineer with 6 years in backend and distributed systems, spanning Java and C# microservices, REST APIs, and event-driven Kafka pipelines. Pursuing an M.S. in Software Engineering at San Jose State University, with distributed-systems projects in Python.

WORK EXPERIENCE

Software Engineer III, Oracle India Private Limited, Hyderabad, India Aug 2021 - Jul 2025

- **Built the Eloqua SMS module's Java microservices on the Helidon MP framework,** integrating Kafka consumers for event-driven processing at 500K+ messages/day.
- **Reduced production incidents 40%** through proactive Prometheus and Grafana alerting across SMS microservices, with dashboards surfacing real-time data-propagation delays across the pipeline.
- **Developed secure, scalable REST APIs across C# and Java microservices** handling 1M+ requests/month, with automatic token-refresh for seamless authentication.
- **Built the backend for SMS Report Consolidated Status,** unifying delivery states into a single accurate view and reducing customer-reported reporting issues.
- **Optimized database performance** with targeted indexes on high-usage tables and converted stored procedures from dynamic to static SQL, improving stored-procedure performance 30%.
- **Modernized the front-end** by migrating legacy UI screens from SproutCore to OJET (ELJ) and building new screens in ASPX/Web Forms, with VBCS and third-party upgrades to keep .NET applications stable.

Software Engineer I, NCR Corporation, Hyderabad, India Jul 2019 - Aug 2021

- **Rewrote a reporting module to improve efficiency 50%,** optimizing SQL queries within stored procedures to resolve performance bottlenecks, and contributed to deployment activities.
- **Mentored junior engineers and led daily scrums and sprint planning,** coordinating across management, engineering, product, and support on production issues.

PROJECTS

PaperCast: Evidence-Grounded Audio Learning Assistant (SJSU) Aug 2026 - Present

- **Designing an agentic system (LangGraph plan-execute-evaluate-retry loop) that turns academic papers into interactive two-host audio episodes,** with a scientific-integrity pipeline that verifies every generated claim against the source via hybrid retrieval (BM25 + embeddings), an NLI model, and an LLM judge.
- **Building interactive voice/text playback** (listener interrupts, depth control, claim-to-source tracing) with adaptive explanations for student and researcher profiles. Python, FastAPI, React, AWS.

AppLens: AI-Assisted Microservice Debugging Platform Nov 2025

- **Built a full-stack debugging platform for 50+ microservices** using dependency analysis and service visualization, cutting manual debugging time 60%.
- **Integrated AI agents over logs and traces,** grounded in the service dependency graph, to accelerate cross-service root-cause detection.

EDUCATION

M.S. in Software Engineering, San Jose State University, San Jose, CA Aug 2025 - Dec 2026

B.E. in Information Technology, Osmania University, Hyderabad, India Aug 2015 - May 2019

TECHNICAL SKILLS

- **Languages:** Java, C#, Python, SQL (PL/SQL), JavaScript, TypeScript, C++, VB.NET
- **Frameworks:** Spring Boot, Helidon, .NET 4.8, ASP.NET, React, Bootstrap
- **Backend & Databases:** Microservices, RESTful APIs, Event-Driven Systems, Kafka, MySQL, PostgreSQL, SQL Server
- **Cloud & DevOps:** AWS (EC2, S3, Lambda), Docker, Kubernetes, Jenkins, TeamCity, Octopus, Maven, Git, YAML
- **Observability & Testing:** Prometheus, Grafana, ELK (Kibana), JUnit, Mockito, Postman
- **Web & Data Formats:** HTML, CSS, JSON, XML
